

Marine Corps Enterprise Information Technology Services (MCEITS)

What is it?

MCEITS is an enterprise IT capability that delivers value to the Marine Corps decision makers, application owners, information managers and network users. MCEITS provides enterprise IT services contained within a world class application and data hosting environment with supporting communications, computing network information assurance, and enterprise services infrastructure. The MCEITS service management design contains industry best practices and will utilize IT Infrastructure Library (ITIL) based principles and methods to provide capabilities to meet Operating Forces and Supporting Establishment requirements. These best practices will ensure that MCEITS provides a strategic net-centric capability, and also ensures that MCEITS becomes the core enabler of the computing and communications capabilities of the MAGTF C2 framework.

Why is it important for the Marine Corps?

MCEITS will enable access to Marine Corps enterprise data, information, applications and services; it will also provide a collaborative information-sharing environment across the business and warfighting domains. It will deliver an enterprise platform with a common hardware, software and facilities infrastructure required to support managed and non-managed hosting services or provisioned hosting services for Marine Corps application owners. It will provide Marine Corps users with access to the core enterprise services necessary to enable rapid collaboration, efficient discovery, and access to trusted data and information through an enterprise portal framework. MCEITS will deliver an agile IT infrastructure that can easily adapt to evolving software, hardware, data, services, and management requirements.

What is the current status?

Initial Operational Capability (IOC) declared 6 Jul 2011. Focus is currently on migration of 18 applications in Fiscal Year 2012.

What is next?

- Final Operational Capability schedule for 4th Quarter Fiscal 2014.
- Pre-Planned Product Improvements to include the Distributed and Expeditionary Platforms are currently in the planning processes and will be executed post FOC.
- Re-compete of operations support and engineering contracts will take place in Fiscal Year 2012.
